Ready to Go Live? Your Streaming Setup Starts Here

Streaming & OBS Setup

Streaming has exploded in popularity in recent years, with more gamers, content creators, and even businesses wanting to share gameplay, tutorials, podcasts, or live events online. Whether you are thinking about starting your first Twitch stream, creating YouTube content, or improving an existing setup, Kerr Solutions IT can help you build a professional streaming system that works smoothly and reliably.

Right here in Central Queensland, we are seeing this growth firsthand. A great local example is **Cowman Gaming Co**, a CQ-based gaming and content community that is using streaming on Twitch, events, and online platforms to bring people together. From eSports tournaments to online content, they are proof that with the right setup and support, you can build something real locally for the whole world to enjoy.

Many people have the passion to stream but quickly discover that getting everything working properly can be confusing. Cameras, microphones, capture software, scenes, audio levels, and streaming platforms all need to be configured correctly before you can go live.

That is where our team comes in.

From Idea To Going Live

At Kerr Solutions IT, we help creators move from wanting to stream to actually going live. Whether you are inspired by creators like Cowman Gaming Co or just want to give it a go yourself, we make the process simple and stress-free.

Our technicians can assist with setting up and configuring streaming systems so that everything works together seamlessly.

We can help with:

- Installing and configuring OBS Studio streaming software
- Setting up stream scenes, overlays, and transitions
- Configuring audio sources and microphone levels
- Linking your system to platforms like Twitch or YouTube
- Optimising system performance for smooth streaming

Once everything is configured, you will be able to start your stream with the click of a button.

Professional Streaming Hardware

A quality stream requires the right equipment, and we carry a large range of high-quality streaming hardware right here in store.

Our streaming gear includes:

- Crystal-clear webcams, including models such as the EMEET StreamCam range
- Elgato Stream Deck XL controllers, giving you full control at your fingertips
- Lighting and accessories to improve video quality

- High-performance gaming PCs capable of handling both gaming and streaming simultaneously

With devices like the Stream Deck XL, you can control your entire broadcast from one panel whether it's switching scenes, muting microphones, triggering effects, or launching applications instantly.

Designed for Simplicity and Reliability

The goal of our streaming setups is not just to make things look good, but to make the entire system easy to operate. Once configured, you should not have to worry about technical issues every time you want to go live.

We set everything up properly the first time, so you can focus on creating content instead of troubleshooting problems.

Whether you are streaming for fun, building a brand, or creating a community like Cowman Gaming Co, having a reliable setup makes all the difference.

Start Streaming Today

If you are thinking about starting a stream, upgrading your current setup, or simply want help configuring OBS and streaming hardware, the team at Kerr Solutions IT is ready to help.

Come in and have a chat with our team in Rockhampton and let us build you a streaming setup that is ready to go from day one.
