

KERR IT solutions

The Art of Looking Cool. The Science of Staying Cool.

KERR IT solutions
WE KNOW COOL

Gaming PCs have become more than just a way to study, do work or play your favourite games. They're a centrepiece on your desk, a reflection of your personality, and something you're proud to show off.

That's why we're excited to announce the arrival of the highly sought-after Hyte X50 series cases at Kerr IT Solutions. With stunning panoramic glass, premium finishes and endless customisation options, these cases are designed to make your gaming setup stand out.

Whether you're chasing a clean minimalist look, a full RGB masterpiece, custom LCD displays, or a themed build around your favourite game, we stock the largest ranges of

gaming cases and accessories in Central Queensland. From Noctua, Corsair and Hyte through to DeepCool, Montech, Thermaltake, Antec and so much more, we have something to suit every style and every budget.

Your PC should be as unique as the person sitting behind it.

With CQ Heat, Looks Are Only Half the Story

As impressive as a gaming PC may look, appearance means very little if it's constantly running hot.

Here in Central Queensland, heat is one of the biggest enemies of computer performance. High ambient temperatures, long gaming sessions and poor airflow can all lead to overheating, reduced performance and shortened hardware life.

That's why every gaming PC we build places a huge emphasis on airflow and cooling.

Whether you're chasing the incredible cooling performance of Arctic, the whisper-quiet operation of the legendary Noctua fans, or simply want the best cooling solution for your budget, our technicians can help design a system that performs as good as it looks.

Introducing the Kerr Cooling & Airflow Lab

Cooling a PC properly isn't guesswork. It's science. That's why we've invested in our brand-new Kerr Cooling & Airflow Lab, equipped with professional diagnostic equipment rarely seen outside specialist workshops.

Using thermal imaging cameras and Fluke heat guns, we can instantly identify hidden hot spots, overheating components and poor airflow without dismantling your computer. Our professional smoke testing equipment allows us to visualise exactly how air moves through your case, showing where cool air enters, where hot air becomes trapped and how airflow can be improved. We also use precision airflow

meters to measure exactly how much air every fan is moving, ensuring your cooling system performs exactly as intended.

Rather than simply fitting more fans and hoping for the best, we can scientifically diagnose and optimise your PC's cooling performance.

Ready to Build, Upgrade or Stay Cool?

At Kerr IT Solutions, we don't just build gaming PCs that look incredible. We build systems designed to handle Central Queensland's conditions.

Whether you're building a brand-new gaming rig, upgrading an existing PC or trying to solve frustrating temperature problems, our team has the knowledge, experience and equipment to get it right - we can fix ANY cooling problem.

If you're ready to build your dream PC, transform your setup, or simply want honest advice on getting the best performance and cooling from your system, come and see our showroom and cooling lab and have a chat with our team. We'll help you create a PC that's built for your style, your budget and the Central Queensland climate.
